Terminal Overview

What is a "Command"?

A "Command" is a line that tells the terminal to perform an action

The 3 Rules of Commands

1

A Command can act alone

2

A Command can act on something

3

A Command can have **Options** which let the command perform its action in a different way

How do you type Commands?

(Syntax of Commands)

<u>Command</u> (-option) (something)

<u>echo</u> -n "hello there!"

A couple of examples

1) <u>killall</u> name of the process

2) <u>cal</u> months and year
